

Please read this document carefully before using this product. The guarantee will be invalidated if the device is damaged by not following instructions detailed in the manual. The company shall not be responsible for any damage or losses however caused, which may be experienced as a result of the installation or use of this product.

## ENDA EUP SERIES PID UNIVERSAL CONTROLLER

Thank you for choosing ENDA EUP Series Universal Controller Devices.

- Dual setpoint value can be selected.
- PT100 ,J, K, L, T, S, R sensor (thermocouple) types can be selected.
- 0-20mA, 4-20mA, 0-10V, 2-10V, 0-25mV and 0-50mV input selections.
- Auto calculation for PID parameters (SELF TUNE).

**⚠ Self tune for automatic PID calculation or manually enter PID parameters if known.**

- Three different feature can be assigned to digital input.
- Three different feature can be assigned to F function key.
- Soft-Start feature.
- Analogue, SSR or Relay Output Control selection.
- 0-20mA and 4-20mA Analogue Output Control selection.
- Up to 16 steps Profile Control.
- A1 Relay output programmable as first Alarm or Cooling control output.
- C/A2 Relay output can be used as second Alarm or Temperature Control output.
- Heating/Cooling control selection.
- Zero point input shift.
- In case of sensor failure, periodically, auto-periodically running or relay state can be selected.
- RS485 Modbus RTU communication protocol feature (Specify at order).

Order Code : EUP **4 2 0 -**        

1 - Size	2 - Supply Voltage	3 - Modbus (Optional)
4420....48x48x87mm 7420....72x72x97mm 8420....48x96x87mm 9420....96x96x50mm	230VAC...90 - 250V AC SM.....10-30V DC / 8-24V AC	RS..... RS-485 Modbus Available (Optional / Specify at order). Blank.... N/A

**RoHS  
Compliant**

**Please see EUPx420  
Series Modbus Address  
Map and Connection  
Diagram Guide for  
Modbus feature.**

Input Type	Scale Range		Accuracy
	°C	°F	
PT100 Resistance Thermometer	EN 60751	-199.9...600.0 °C	-199.9...999.9 °F
PT100 Resistance Thermometer	EN 60751	-200...600 °C	-328...1112 °F
J (Fe-CuNi) Thermocouple	EN 60584	-30.0...600°C	-22.0...999.9 °F
J (Fe-CuNi) Thermocouple	EN 60584	-30...600°C	-22...1112 °F

0-20mA input		-1999...+9999 (max. scale range 10000)	± 0,2% (for full scale) ± 1 digit
4-20mA input		-1999...+9999 (max. scale range 10000)	± 0,2% (for full scale) ± 1 digit
0-10V input		-1999...+9999 (max. scale range 10000)	± 0,2% (for full scale) ± 1 digit
2-10V input		-1999...+9999 (max. scale range 10000)	± 0,2% (for full scale) ± 1 digit
0-25mV input		-1999...+9999 (max. scale range 10000)	± 0,2% (for full scale) ± 1 digit
0-50mV input		-1999...+9999 (max. scale range 10000)	± 0,2% (for full scale) ± 1 digit

### ENVIRONMENTAL CONDITIONS

Ambient/storage temperature	0 ... +50°C/-25 ... +70°C
Max. Relative humidity	Relative humidity 80% for temperatures up to 31°C decreasing linearly to 50% relative humidity at 40°C.
Rated pollution degree	According to EN 60529; Front panel : IP65, Rear panel : IP20
Height	Max. 2000m

**⚠ KEEP AWAY** device from exposed to corrosive, volatile and flammable gases or liquids and DO NOT USE the device in similar hazardous locations.

### ELECTRICAL CHARACTERISTICS

Supply	90-250V AC, 50/60Hz or 10-30VDC / 8-24VAC ±10% SMPS
Power consumption	Max. 5VA
Wiring	Power screw-terminal connections: 2.5mm <sup>2</sup> , Signal screw-terminal connections: 1,5mm <sup>2</sup> .
Line resistance	Max. 100 Ohm
Data retention	EEPROM (minimum 10 years)
EMC	EN 61326-1: 2013 (Performance criterion B satisfied for EN 61000-4-3 standard).
Safety requirements	EN 61010-1: 2010 (Pollution degree 2, overvoltage category II)

### OUTPUTS

C/A2 Output	Relay : 250V AC, 8A (for resistive load), NO+NC (Control or Alarm2 Output selection).
A1 Output	Relay : 250V AC, 8A (for resistive load), NO (Alarm1 and Cooling Control Output selection).
ANL/SSR Output	Max. SSR Output ; 0-20mA, 4-20mA, 24V 20mA. Max. load resistance ; 600 Ohm (12 bit 0.2% accuracy).
Life expectancy for relay	Without load 30.000.000 switching; 250V AC, 8A (resistive load) 300.000 switching.

### CONTROL

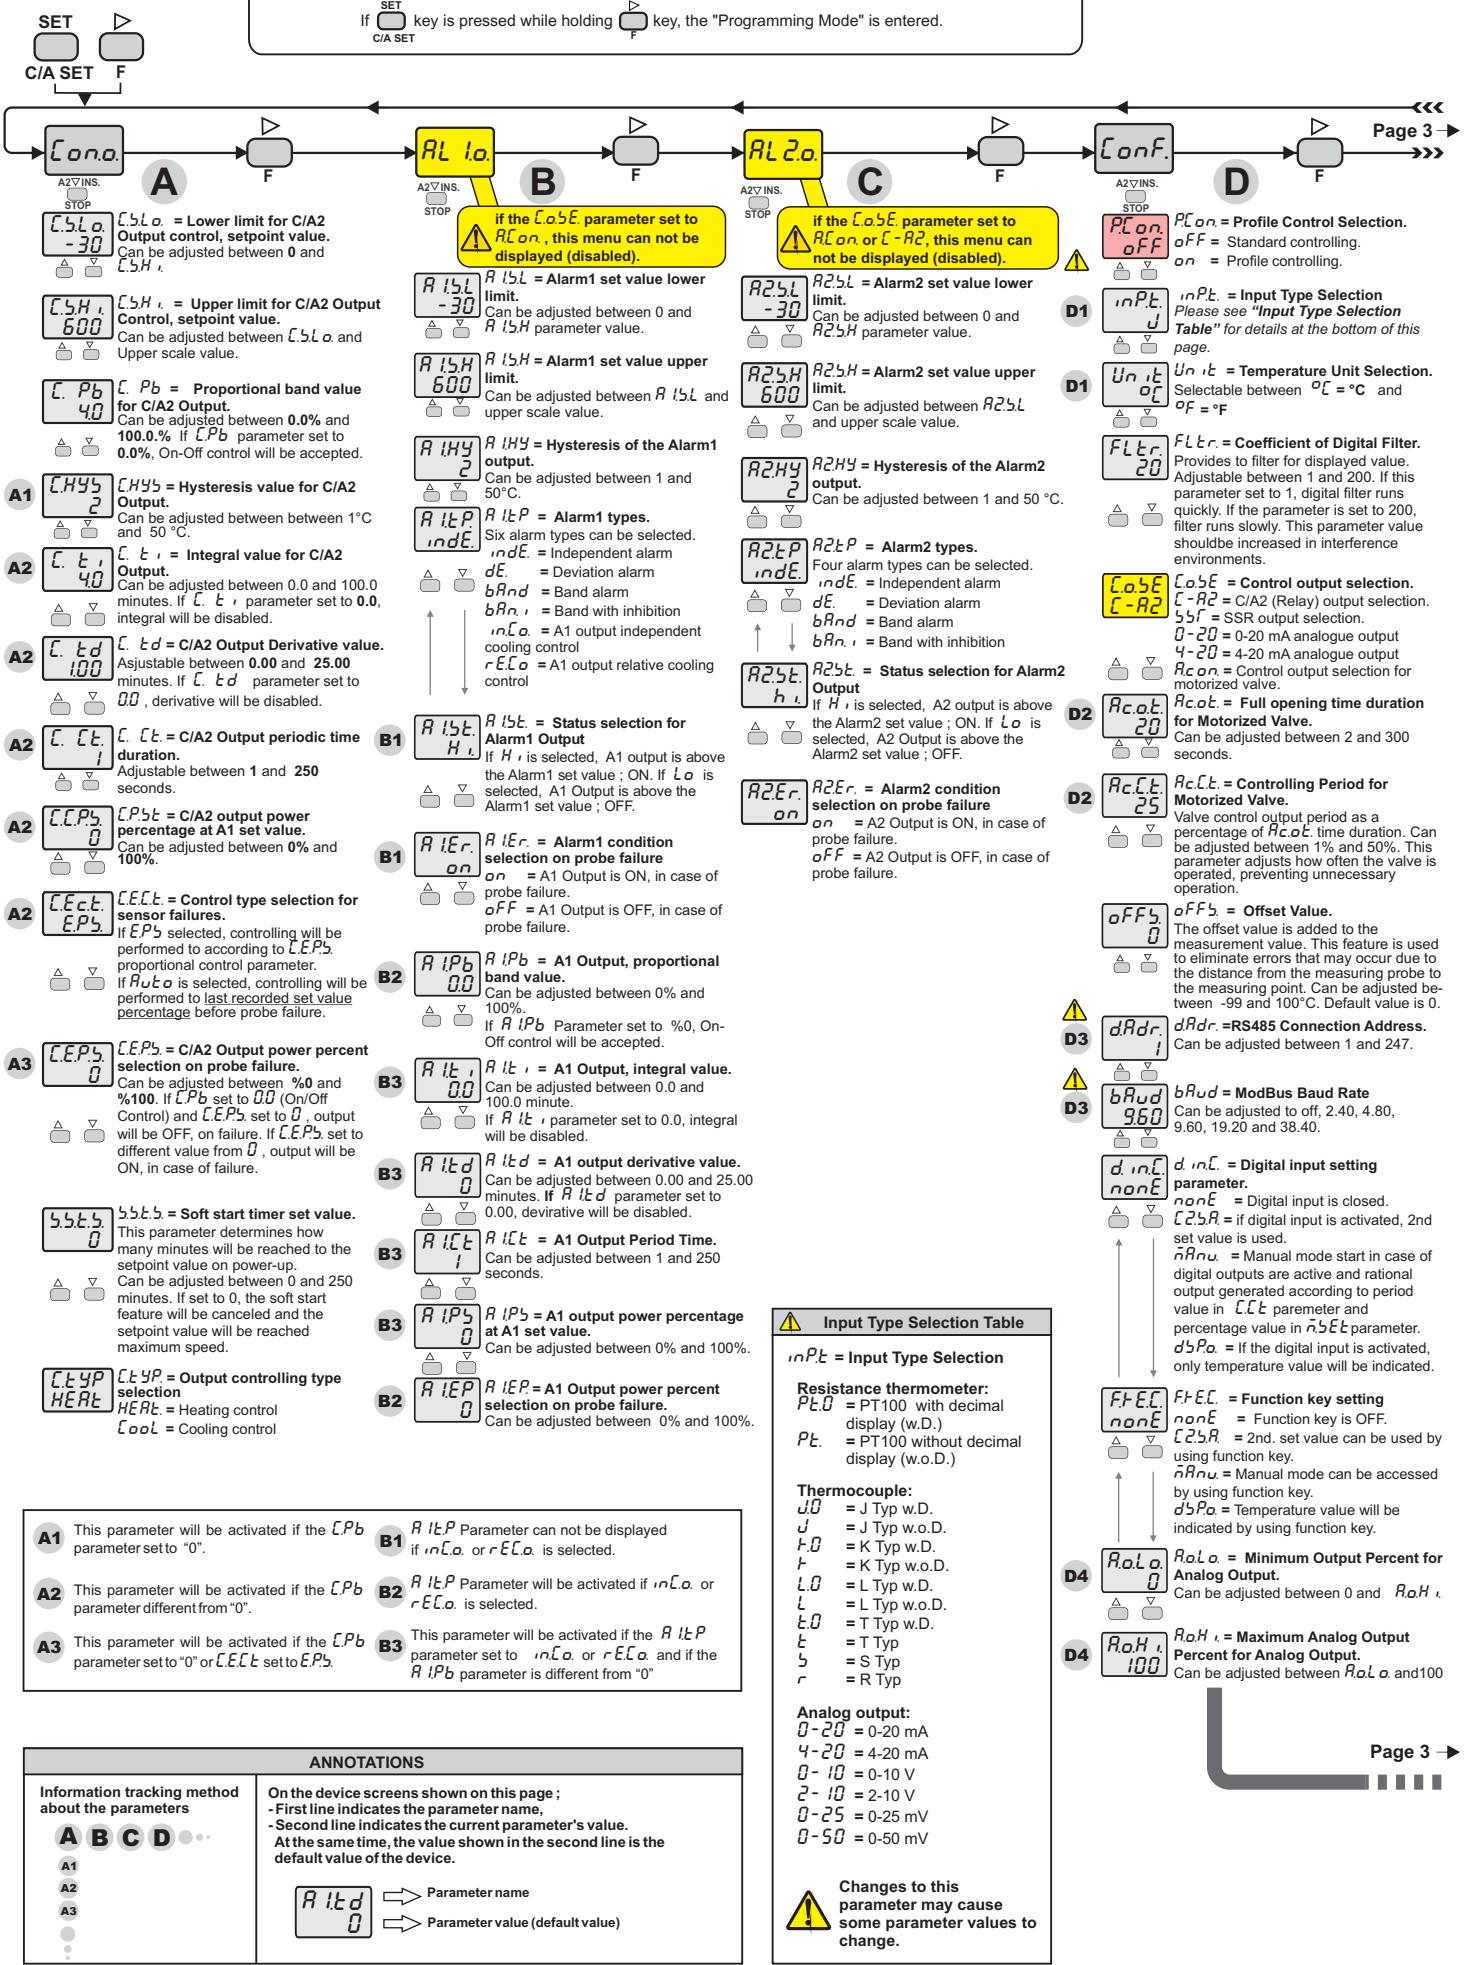

Control type	Single Setpoint and Alarm Control.
Control algorithm	On-Off / P, PI, PD, PID (selection).
A/D converter	14 bit.
Sampling time	Min. 100ms.
Proportional band	Can be adjusted between %0.0 and %100.0 . If Pb=%0.0 , ON-OFF control is selected.
Control period	Can be adjusted between 1 and 125secs.
Hysteresis	Can be adjusted between 1 and 50°C/F.
Output power	Setpoint value ratio can be adjusted between %0 and %100 .

### HOUSING

Housing type	Suitable for flush-panel mounting according to DIN 43 700.
Dimensions	EUP4420 : W48xH48xD87mm, EUP7420 : W72xH72xD97mm, EUP8420 : W48xH96xD87mm, EUP9420 : W96xH96xD50mm.
Weight	Approx. 400g (250g for EUP4400) After packing.
Enclosure material	Self extinguishing plastics

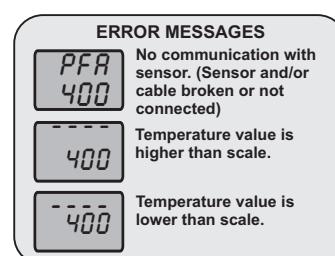

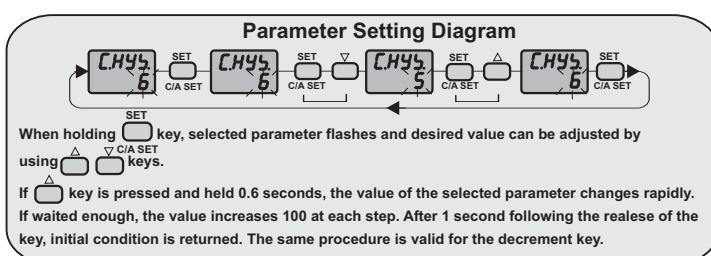

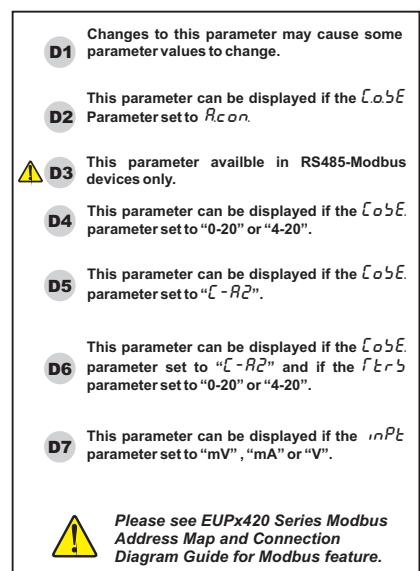

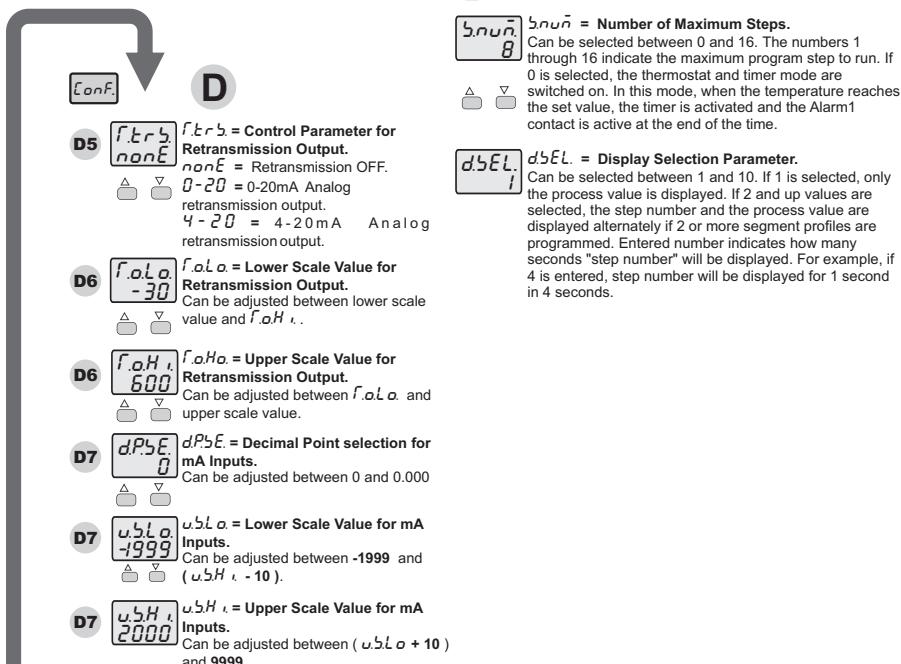

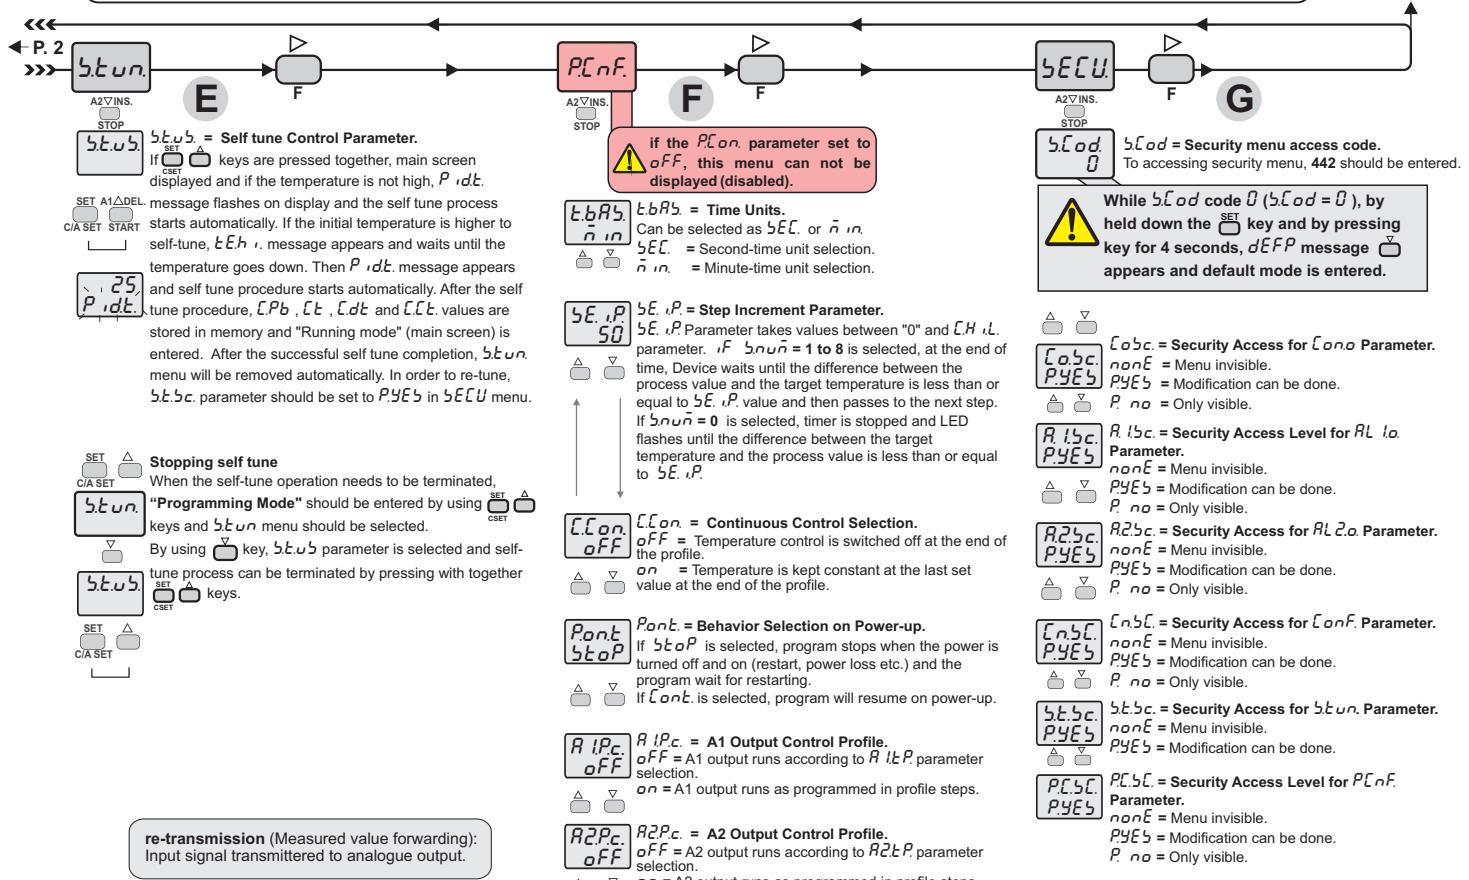

**⚠ DO NOT clean the device with solvent (thinner, gasoline, acid etc.) and / or abrasive cleaning agents.**

## ENTERING TO PROGRAMMING MODE

## RUNNING MODE

During in "Programming Mode", if no key is pressed for 20 sec, settings automatically saved and device returns to the "Running Mode" (to the home screen). Alternatively, by pressing  key "Running Mode" is entered and by pressing both   keys at once, settings automatically saved and device returns to the "Running Mode" (to the home screen).

## TERMS AND DISPLAY

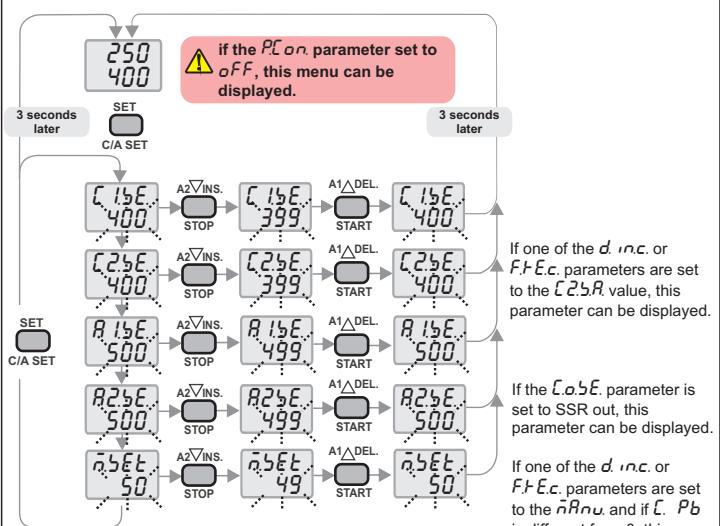

- (1) Indicates measured value and set values in "Running Mode". Indicates the parameters and names in "Programming Mode".
- (2) Lights up, if timer is displayed and flashes while timer is running.
- (3) Increment key in "Running and Programming Mode". Parameter selection key in "Programming Mode".
- (4) Decrement key. By pressing this key in "Running Mode", software version can be displayed. Parameter selection key in "Programming Mode".
- (5) Selectable function key "Running Mode". Menu selection key in "Programming Mode".
- (6) Control and Alarm set key in "Running Mode". Parameter set key in "Programming Mode".

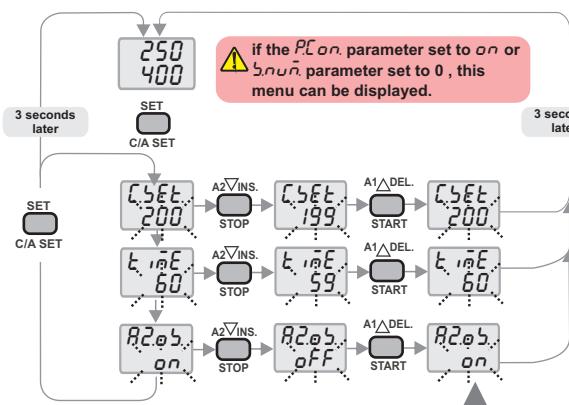

(1) PV and SV indicators	PV 7 Segment 4 digits red LED , SV 7 Segment 4 digits yellow LED display. Character height : PV and SV display 7.2M
(2) Timer Indicator	Indicates during the timer displayed and flashes while timer running in "Profile Mode".
(3),(4),(5),(6) Keypads	Micro switch
(7) Status Indicators	Red LED indicators for Control, Alarm1 and Analog/SSR outputs.

## SETTING OPTIONS IN RUNNING MODE

### SETTING UP ALARM CONTROL AND SETPOINT VALUES

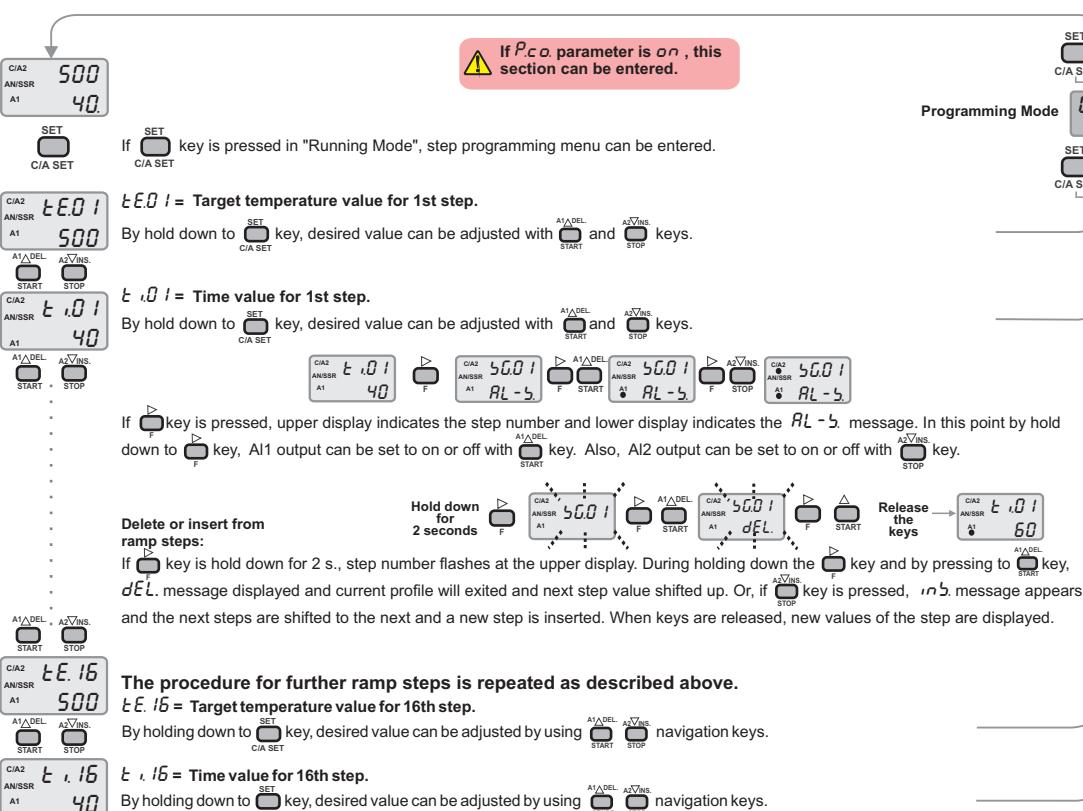

### SETTING UP TIMER/THERMOSTAT SETPOINT VALUES

### R2o5 Parameter :

This parameter appears if the *PLCOn* parameter set to *55r*, *0-20* or *4-20* and whith the *R2Pc* parameter is set to on. If *R2o5* is set to *on*, A2 output state becomes on. At the end of the duration or if STOP key is pressed, A2 state will be off (this parameter is described in PC16 coils at ModBus address map).

## ADJUSTING PROFILE STEP PARAMETERS

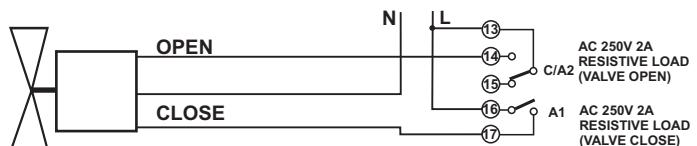

### ERROR MESSAGES

- PFA 400 No communication with sensor. (Sensor and/or cable broken or not connected)
- 400 Temperature value is higher than scale.
- 400 Temperature value is lower than scale.

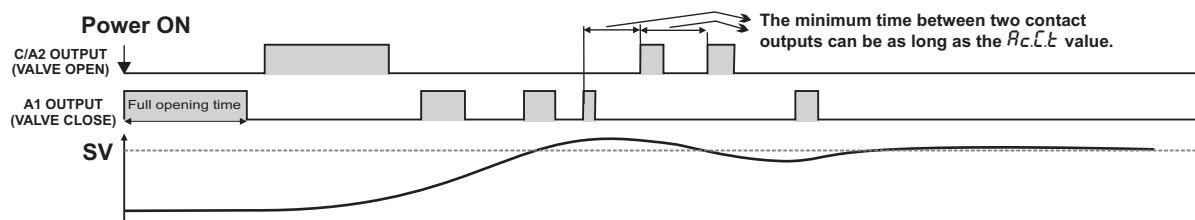

Attention !  
In order for the alarm outputs to function as set in the profile steps, *R1Pc* and *R2Pc* parameters must be set to *on* before applying the profile.

## MOTORIZED VALVE CONNECTION AND SETTINGS

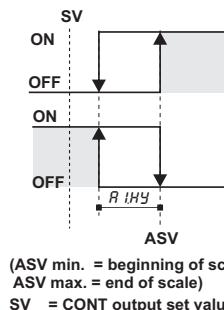

Motorized valve connection must be applied as shown figure above (if the motorized valve electrical values are incompatible with EUPx420 contact output values, an additional contactor must be connected). And  $\text{L}_{\text{o}}\text{sE}$  parameter in the EUPx420 must be selected as  $\text{R}_{\text{con}}$ . Full opening time of the motorized valve connected to the device is entered in  $\text{R}_{\text{c.o.t.}}$  parameter as seconds. Full opening time must be entered to  $\text{R}_{\text{c.c.t.}}$  parameter as percentage for motorized valve running-up time.

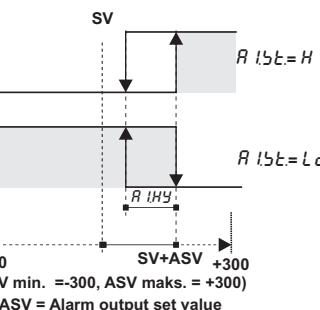

## ALARM1 AND ALARM2 OUTPUT TYPES

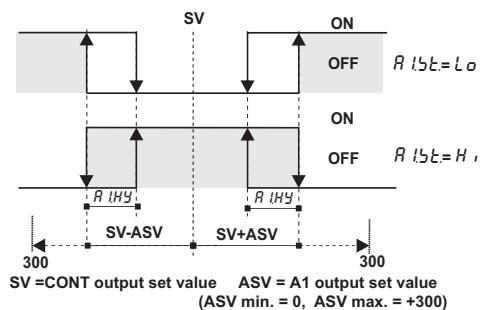

Independent Alarm  
 $\text{R}_{\text{I}\text{t}\text{P.}} = \text{indE}$

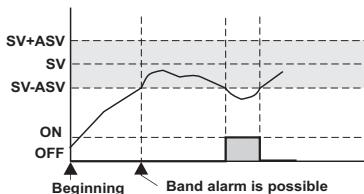

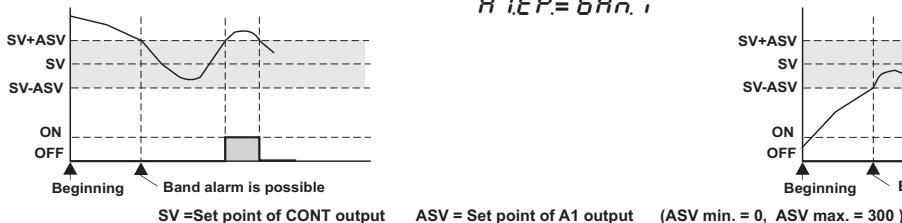

Deviation Alarm  
 $\text{R}_{\text{I}\text{t}\text{P.}} = \text{dE}$

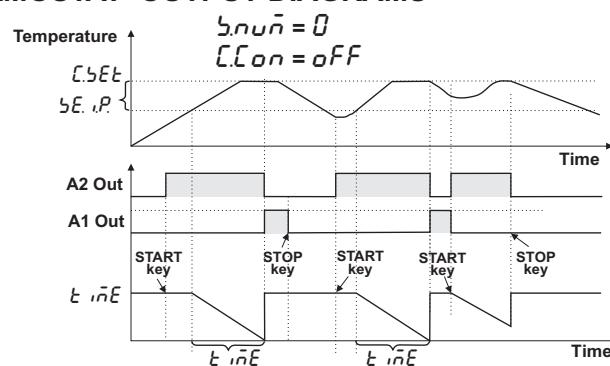

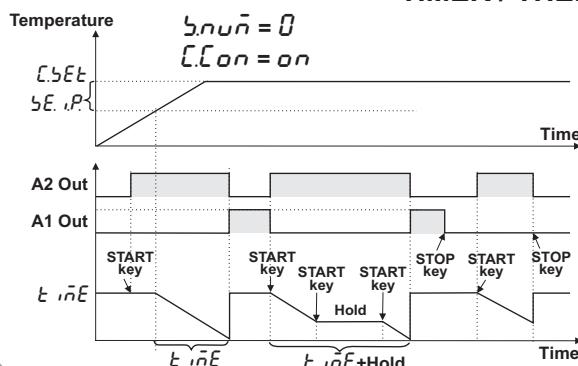

Band Alarm  
 $\text{R}_{\text{I}\text{t}\text{P.}} = \text{bAnd}$

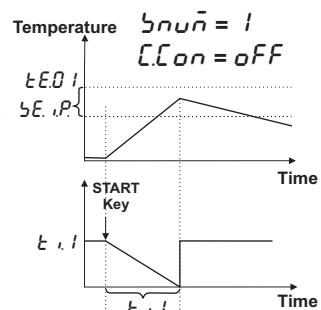

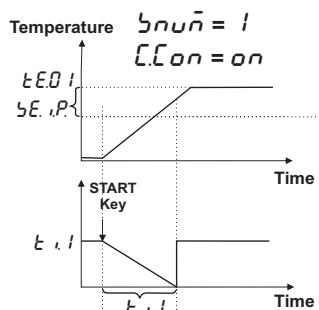

Band Alarm With Inhibition  
 $\text{R}_{\text{I}\text{t}\text{P.}} = \text{bRn.}$

## TIMER / THERMOSTAT OUTPUT DIAGRAMS

## PROFILE CONTROL OUTPUT DIAGRAMS

# MULTI-STEP PROFILE CONTROL OUTPUT GRAPHICS

Diagram-5

	Step1	Step2	Step3	Step4	Step5
Target Temperature	$t_{E.1} = 100$	$t_{E.2} = 100$	$t_{E.3} = 300$	$t_{E.4} = 300$	$t_{E.5} = 100$
Time	$t_{.1} = 30$	$t_{.2} = 20$	$t_{.3} = 60$	$t_{.4} = 40$	$t_{.5} = 60$
A1	ON	OFF	OFF	ON	OFF
A2	OFF	ON	OFF	ON	OFF

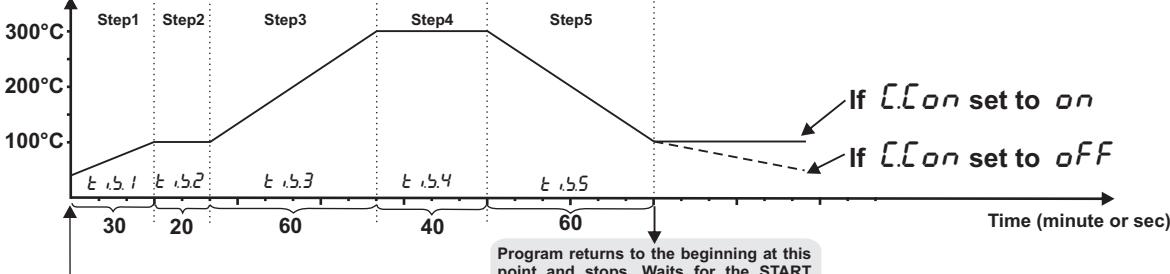

**bnuñ** parameter should be set to 5 for five step program.

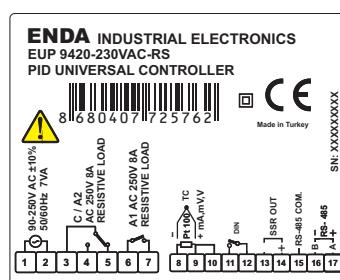

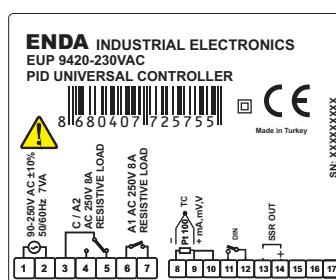

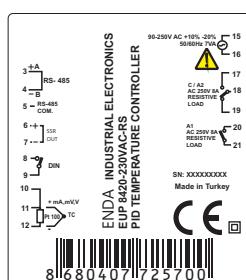

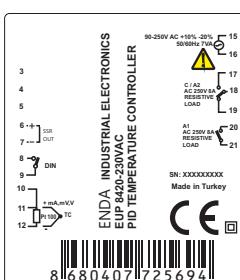

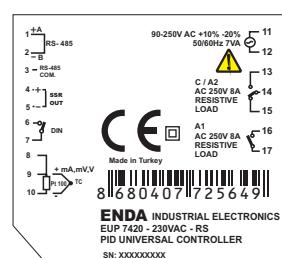

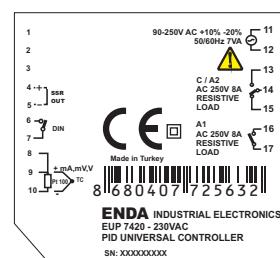

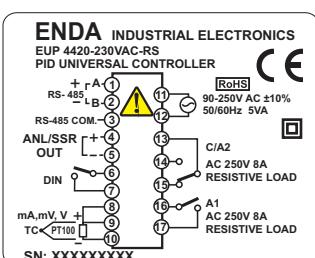

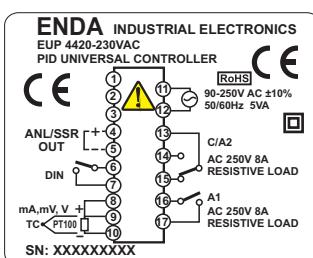

If  $R_{IPC}$  parameter is set as **on**, A1 runs according to profile program value.  
If  $R_{IPC}$  parameter set as **indE**, A1 output will be activated according to  $R_{IE}$  value.

If  $E_{o,E}$  parameter is set as **55r**, **0-20** or **4-20** and  $R_{2PC}$  parameter set as **on**, A2 runs according to profile program value.  
If  $R_{2PC}$  parameter set as **indE**, A2 output will be activated according to  $R_{2SE}$  value.

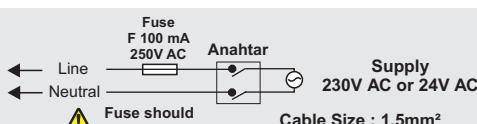

## CONNECTION DIAGRAM

### NOTE :

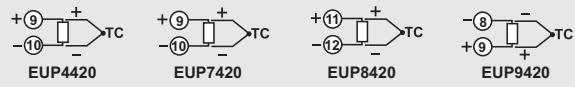

#### SUPPLY VOLTAGE

184-253V AC or 21.6-26.4V AC	EUP4420	EUP7420	EUP8420	EUP9420
50/60Hz 5VA	(11)	(12)	(15)	(2)

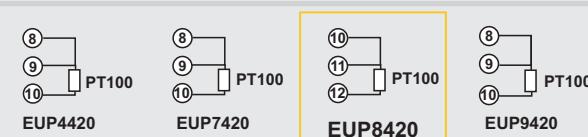

#### SENSOR INPUT:

For J-K-T-S and R Thermocouples : Use the correct compensating cable. Do not make any supplement to cables. Connect the thermocouple cables to the right places at the input terminal.

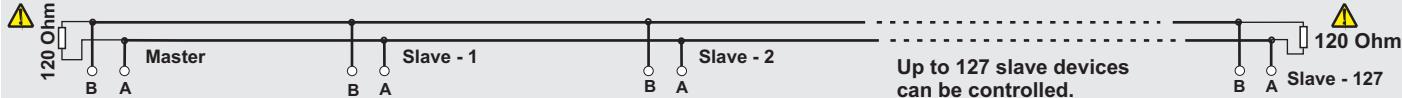

For resistance (PT100) Sensor : In order to using 2-wire resistance sensors (PT100), 8th and 9th terminals must be short circuited on EUP4420, EUP7420 and EUP9420 devices. Also on EUP8420 devices, 10th and 11th terminals must be short circuited. Please check connection diagrams carefully.

## MODBUS CONNECTION

Please see EUPx420 Series Modbus Address Map and Connection Diagram Guide for Modbus feature.

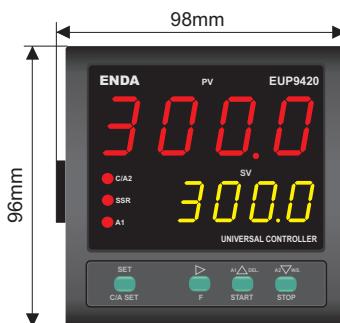

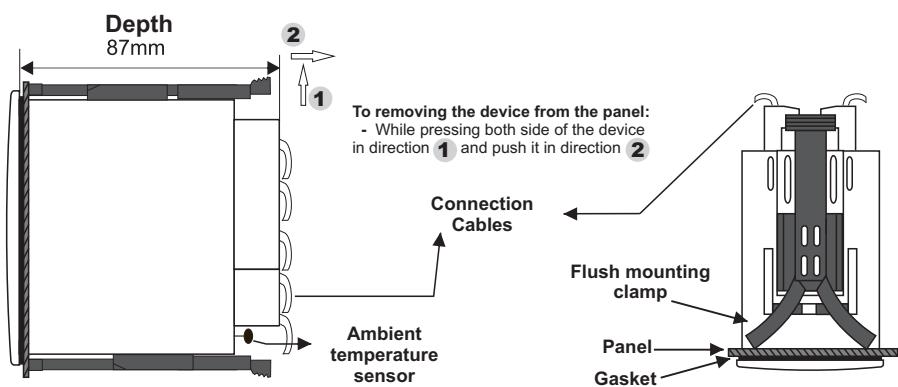

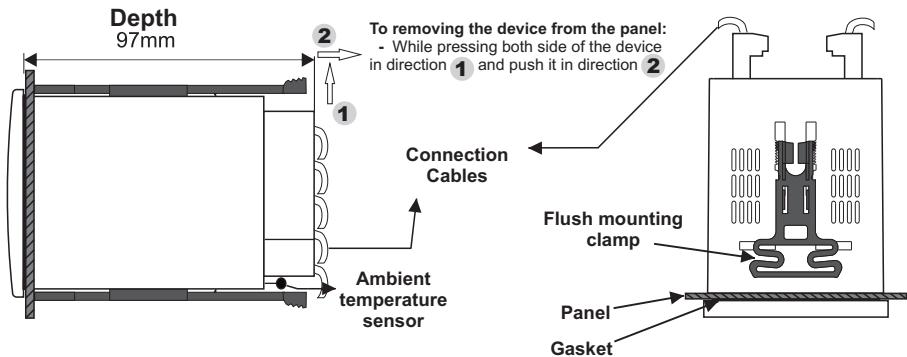

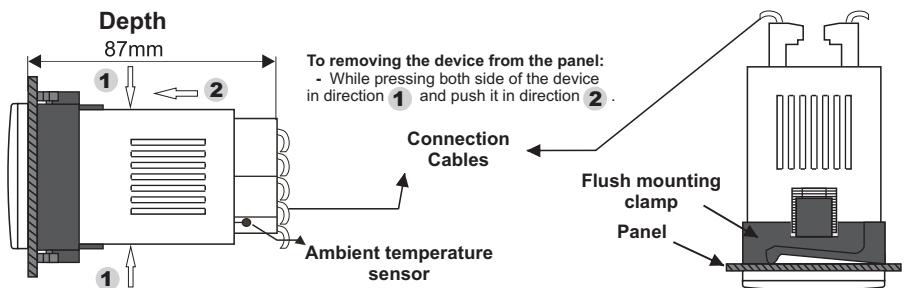

### \* MODBUS CONNECTION DIAGRAM

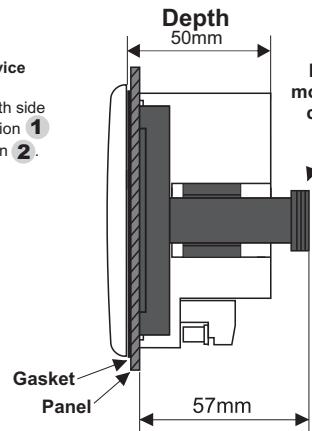

Termination should be accomplished by attaching 120 Ohm resistors to the start and at the end of the communication line.

\* Applies to devices with Modbus function.

## DIMENSIONS

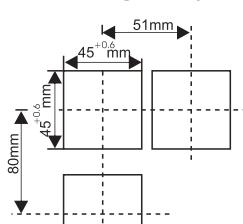

To removing the device from the panel :  
- While pressing both side of the device in direction 1 and push it in direction 2.

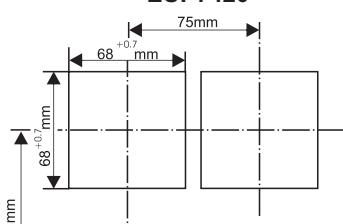

## PANEL CUT-OUT

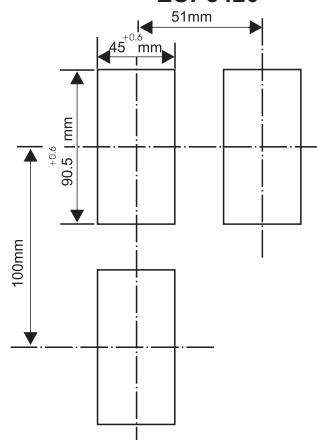

**EUP4420**

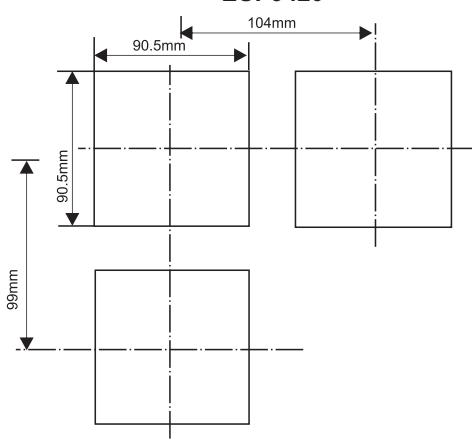

**EUP7420**

**EUP8420**

**EUP9420**

1) While panel mounting, additional distance required for connection cables should be considered (except EUP9420).

2) Panel thickness should be maximum 9mm for EUP4420, 10mm for EUP7420, 8mm for EUP8420 and 6mm for EUP9420.

3) If there is no free space at back side of the device, it would be difficult to remove it from the panel. Required minimum free spaces ;  
EUP4420 = 100mm, EUP7420 = 90mm, EUP8420 = 90mm, EUP9420 = 60mm.

**ENDA EUPx420 Series PID Temperature Controllers** are intended for installation in control panels. Make sure that the device is used only for intended purpose. The shielding must be grounded on the instrument side.

During an installation, all of the cables that are connected to the device must be free of energy. The device must be protected against inadmissible humidity, vibrations, severe soiling. Make sure that the operation temperature is not exceeded. All input and output lines that are not connected to the supply network must be laid out as shielded and twisted cables. These cables should not be close to the power cables or components. The installation and electrical connections must be carried on by a qualified staff and must be according to the relevant locally applicable regulations.

<b>C1</b>	(0001)h	Bit	Alarm2 condition selection on probe failure ( 0 = Off , 1 = On )	R/W	<i>A.2.E.r.</i>	0
<b>C2</b>	(0002)h	Bit	Alarm1 condition ( 0 = Active Low ,1 =Active High)	R/W	<i>A.1.s.t.</i>	1
<b>C3</b>	(0003)h	Bit	Alarm1 condition selection on probe failure ( 0 = Off , 1 = On )	R/W	<i>A.1.E.r.</i>	0
<b>C4</b>	(0004)h	Bit	Control output configuration ( 0 = Heat ; 1 = Cool )	R/W	<i>C.t.y.P.</i>	0
<b>C5</b>	(0005)h	Bit	Temperature unit ( 0 = °C ; 1 = °F)	R/W	<i>un.i.t.</i>	0
<b>C6</b>	(0006)h	Bit	Control outputs active ( 0 = Control outputs active, 1 = Only display mode)	R/W	----	0
<b>C7</b>	(0007)h	Bit	Controlling according to 2nd temperature setpoint (If C7 = 0 is H0, if C7 = 1 is H1)	R/W	----	0
<b>C8</b>	(0008)h	Bit	Auto/Manual selection (0 = Automatic "Running mode", 1 = Manual "Running mode". In this mode, output generated according to H39 parameter.)	R/W	----	0
<b>C9</b>	(0009)h	Bit	Control format in case of probe failure (0 = H10 proportional control according to percentage value, 1 = Error found before the setpoint control is done with the value of the proportional control	R/W	<i>C.E.c.t.</i>	0

## 1.3 Memory Map for Input Registers

Parameter Number	Input Register Adress Decimal (Hex)	Data Type	Parameter Description	Read / Write Permission
<b>I0</b>	0000d (0000h)	Word	Measured temperature	R
<b>I1</b>	0001d (0001h)	Word	Analog output percentage	R
<b>I2</b>	0002d (0002h)	Word	Measurement error codes 0 = No error, 1 = Sensor short circuit, 2 = Lower scale error, 3 = Upper scale error, 4 = Sensor connection lost, 5 = Wrong input selection.	R
<b>I3</b>	0003d (0003h)	Word	Self tune condition codes 0 = No error, 1 = Initial temperature is higher than 60% setpoint value, 2 = Calculating PID parameters, 3 = Calculating power set parameters	R
<b>I4</b>	0004d (0004h)	Word	Current (active) temperature setpoint.	R
<b>I5</b>	0005d (0005h)	Word	Reserved	R
<b>I6</b>	0006d (0006h)	Word	Current (active) decimal point value (0 = No decimal point, 1 = 0.0 Decimal point is tenths)	R

## 1.4 Memory Map for Discrete input

Parameter Number	Discrete Input Address	Data Type	Parameter Description	Read / Write Permission
<b>D0</b>	(0000)h	Bit	C/A2 Control output status (0 = OFF ,1 = ON)	R
<b>D1</b>	(0001)h	Bit	A1 Output status (0 = OFF , 1 = ON )	R
<b>D2</b>	(0002)h	Bit	SSR Output status (0 = OFF ,1 = ON)	R
<b>D3</b>	(0003)h	Bit	Digital input status (0 = OFF ,1 = ON)	R

# ENDA EUPx420 SERIES PID TEMPERATURE CONTROLLER MODBUS PROTOCOL ADDRESS MAP

## 2.1 Memory Map for Profile Control Holding Registers

Parameter Number	Holding Register Adress Decimal (Hex)	Data Type	Data Content	Read / Write Permission	Parameter Name	Default Value																																
<b>PH0</b>	0100d (0064h)	Word	Profile time base set value. (0 = 0000s, 1 = 00m59s, 2 = 0000m, 3 = 99m59s)	R/W	<i>t.bR5.</i>	0																																
<b>PH1</b>	0101d (0065h)	Word	Maximum number of steps (can be adjusted between 0 and 16. If set to 0, runs on timer/thermostat mode)	R/W	<i>5.nuñ.</i>	0																																
<b>PH2</b>	0102d (0066h)	Word	Target temperature difference for increasing the step. (It can be set between 0 and H3 parameter. If the step time is reached before the target temperature is reached when the profile is checked, then the difference between the target temperature and the measured temperature is expected to be less than or equal to this parameter value and then proceed to the next step. If the difference is smaller than or equal to this parameter, the timer is switched on. See Drawing-4 / page 4 on user manual).	R/W	<i>5E.iP.</i>	0																																
<b>PH38</b>	0138d (008Ah)	Word	Display selection parameter: It can take between 1 and 10 values. When 1 is selected, only the process value is displayed. When 2 and up values are selected, the step number and the process value are displayed alternately if 2 or more step profiles are programmed. The entered number indicates the number of seconds to display the step number. For example, if 4 is entered, the step number is displayed for 1 second in 4 seconds.	R/W	<i>d.5EL.</i>	0																																
<b>PH3</b>	0103d (0067h)	Word	1st-Step target temperature set value (can be adjusted between H2 and H3 parameter) If PH1 parameter set 0, temperature setpoint for Timer/Termostat mode.	R/W	<i>t.E01</i> <i>C.5Et</i>	200																																
<b>PH4</b>	0104d (0068h)	Word	1st-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter). If PH1 parameter set 0, time setpoint for Timer/Termostat mode.	R/W	<i>t..01</i> <i>t..ñE</i>	60																																
<b>PH5</b>	0105d (0069h)	Word	2nd-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E02</i>	200																																
<b>PH6</b>	0106d (006Ah)	Word	2nd-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..02</i>	60																																
<b>PH7</b>	0107d (006Bh)	Word	3rd-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E03</i>	200																																
<b>PH8</b>	0108d (006Ch)	Word	3rd-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..03</i>	60																																
<b>PH9</b>	0109d (006Dh)	Word	4th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E04</i>	200																																
<b>PH10</b>	0110d (006Eh)	Word	4th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..04</i>	60																																
<b>PH11</b>	0111d (006Fh)	Word	5th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E05</i>	200																																
<b>PH12</b>	0112d (0070h)	Word	5th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..05</i>	60																																
<b>PH13</b>	0113d (0071h)	Word	6th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E06</i>	200																																
<b>PH14</b>	0114d (0072h)	Word	6th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..06</i>	60																																
<b>PH15</b>	0115d (0073h)	Word	7th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E07</i>	200																																
<b>PH16</b>	0116d (0074h)	Word	7th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..07</i>	60																																
<b>PH17</b>	0117d (0075h)	Word	8th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E08</i>	200																																
<b>PH18</b>	0118d (0076h)	Word	8th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..08</i>	60																																
<b>PH19</b>	0119d (0077h)	Word	9th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E09</i>	200																																
<b>PH20</b>	0120d (0078h)	Word	9th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..09</i>	60																																
<b>PH21</b>	0121d (0079h)	Word	10th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E10</i>	200																																
<b>PH22</b>	0122d (007Ah)	Word	10th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..10</i>	60																																
<b>PH23</b>	0123d (007Bh)	Word	11th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E11</i>	200																																
<b>PH24</b>	0124d (007Ch)	Word	11th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..11</i>	60																																
<b>PH25</b>	0125d (007Dh)	Word	12th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E12</i>	200																																
<b>PH26</b>	0126d (007Eh)	Word	12th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..12</i>	60																																
<b>PH27</b>	0127d (007Fh)	Word	13th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E13</i>	200																																
<b>PH28</b>	0128d (0080h)	Word	13th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..13</i>	60																																
<b>PH29</b>	0129d (0081h)	Word	14th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E14</i>	200																																
<b>PH30</b>	0130d (0082h)	Word	14th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..14</i>	60																																
<b>PH31</b>	0131d (0083h)	Word	15th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E15</i>	200																																
<b>PH32</b>	0132d (0084h)	Word	15th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..15</i>	60																																
<b>PH33</b>	0133d (0085h)	Word	16th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	<i>t.E16</i>	200																																
<b>PH34</b>	0134d (0086h)	Word	16th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	<i>t..16</i>	60																																
<b>PH35</b>	0135d (0087h)	Word	A1 Output control bits in steps. <table style="margin-left: auto; margin-right: auto;"> <tr> <td><b>B15</b></td><td><b>B14</b></td><td><b>B13</b></td><td><b>B12</b></td><td><b>B11</b></td><td><b>B10</b></td><td><b>B9</b></td><td><b>B8</b></td><td><b>B7</b></td><td><b>B6</b></td><td><b>B5</b></td><td><b>B4</b></td><td><b>B3</b></td><td><b>B2</b></td><td><b>B1</b></td><td><b>B0</b></td> </tr> <tr> <td>Step8</td><td>Step7</td><td>Step6</td><td>Step5</td><td>Step4</td><td>Step3</td><td>Step2</td><td>Step1</td><td>Step16</td><td>Step15</td><td>Step14</td><td>Step13</td><td>Step12</td><td>Step11</td><td>Step10</td><td>Step9</td> </tr> </table>	<b>B15</b>	<b>B14</b>	<b>B13</b>	<b>B12</b>	<b>B11</b>	<b>B10</b>	<b>B9</b>	<b>B8</b>	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>	Step8	Step7	Step6	Step5	Step4	Step3	Step2	Step1	Step16	Step15	Step14	Step13	Step12	Step11	Step10	Step9	R/W	----	0

## 2.2 Memory Map for Step Control Bits

Parameter Number	Coil Address	Data Type	Data Content	Read / Write Permission	Parameter Name	Default Value
<b>PC0-PC15</b>	0100d (0064h) 0115d (0073h)	Bit	A1 alarm output programming coils in profile steps ; If PC0=1, A1 output is ON at 1st step.... If PC15=1, A1 output will be ON at 16th step.	R/W		0
<b>PC16-PC31</b>	0116d (0074h) 0131d (0083h)	Bit	C/A2 alarm output programming coils in profile steps ; If PC16=1, C/A2 output is ON at 1st step.... If PC31=1, C/A2 output will be ON at 16th step.	R/W		0
<b>PC32</b>	0132d (0084h)	Bit	Depending on set control or profile control selection. (PC32=0 thermostat mode, PC32=1 profile control mode)	R/W	P.Con.	0
<b>PC33</b>	0133d (0085h)	Bit	If PC33 = 0, in profile mode, the profile is stopped and the first step is returned. If PC33 = 1, the profile is started in profile mode.	R/W		0
<b>PC34</b>	0134d (0086h)	Bit	If PC34 = 0, the profile continues to run. If PC34 = 1, the profile operation is put on hold (Hold mode).	R/W		0
<b>PC35</b>	0135d (0087h)	Bit	If PC35 = 0, the control process is finished when the profile is finished (Control outputs are OFF). If PC35 = 1, the control is continued according to the last set value when the profile is finished.	R/W	E.Con.	0
<b>PC36</b>	0136d (0088h)	Bit	If PC36 = 0, the profile stops and returns to 1st step if power-off. If PC36 = 1, In case of power-off or restarted and the current step value of the temperature setpoint(s) are not configured for resuming, returns to the 1st step and the profile stops.	R/W	P.on.t.	0
<b>PC37</b>	0137d (0089h)	Bit	If PC37 = 0, output A1 is controlled according to H22 parameter. If PC37 = 1 and PC32 = 1, output A1 is controlled at each step according to PH35 parameter.	R/W	R.IP.c.	0
<b>PC38</b>	0138d (008Ah)	Bit	If PC38 = 0, output A2 is controlled according to H27 parameter. If PC38 = 1 and PC32 = 1, output C / A2 is controlled at each step according to PH36 parameter.	R/W	R2.P.c.	0

## 2.3 Memory Map for Step Control Input Registers

Parameter Number	Input Register Address Desimal (Hex)	Data Type	Parameter Description	Read / Write Permission
<b>PI0</b>	0100d (0064h)	Word	The number of the active step.	R
<b>PI1</b>	0101d (0065h)	Word	Remaining time indicator of the active step.	R
<b>PI2</b>	0102d (0066h)	Word	Target temperature value of the active step.	R

## 2.4 Memory Map for Step Control Status Indicator Bits

Parameter Number	Discrete Input Address	Data Type	Parameter Description	Read / Write Permission
<b>PD0</b>	0100d (0064h)	Bit	If PD0=1, profile is in constant temperature step.	R
<b>PD1</b>	0101d (0065h)	Bit	If PD1=1, profile is in heating step.	R
<b>PD2</b>	0102d (0066h)	Bit	If PD2=1, profile is in cooling step.	R
<b>PD3</b>	0103d (0067h)	Bit	If PD3=1, profile terminated..	R
<b>PD4</b>	0104d (0068h)	Bit	If PD4=1, profile step timer is 0.	R
<b>PD5</b>	0105d (0069h)	Bit	PD5=1, profile step timer is running.	R

## 3.1 Memory Map for Software Revision Input Registers

Software Revision	61472d (F020h)	14 Word	Software name and update is read in ASCII format and as 14 word. For example : EU4420-01 03 Feb 2016. Memory Formats :	R
			Word 1 Word 2 Word 3 Word 4 Word 5 Word 6 Word 7 Word 8 Word 9 Word 10 Word 11 Word 12 Word 13 Word 14 UE 4 4 0 2 0 - 1 0 0 0 0 3 0 F b e 2 1 0 . 6	

**NOTE :**  
To view each word correctly by changing the byte sequences should be displayed as ASCII TEXT

## ENDA EUPx420 SERIES PID TEMPERATURE CONTROLLER MODBUS PROTOCOL ADDRESS MAP

### 4. MODBUS ERROR MESSAGES

Modbus protocol has two types error, communication error and operating error. Reason of the communication error is data corruption in transmission. Parity and CRC control should be done to prevent communication error. Receiver side checks parity and CRC of the data. If they are wrong, the message will be ignored. If format of the data is true but function doesn't perform for any reason, operating error occurs. Slave realizes error and sends error message. Most significant bit of function is changed '1' to indicate error in error message by slave. Error code is sent in data section. Master realizes error type via this message.

#### ModBus Error Codes

Error Code	Name	Meaning
01	ILLEGAL FUNCTION	The function code received in the query is not an allowable action for the slave. If a Poll Program Complete command was issued, this code indicates that no program function preceded it.
02	ILLEGAL DATA ADDRESS	The data address received in the query is not an allowable address for the slave.
03	ILLEGAL DATA VALUE	A value contained in the query data field is not an allowable value for the slave.

Message sample ;

Structure of command message (Byte Format)

Device Address	(0A)h
Function Code	(01)h
Beginning address of coils.	MSB (04)h
	LSB (A1)h
Number of coils (N)	MSB (00)h
	LSB (01)h
CRC DATA	LSB (AC)h
	MSB (63)h

Structure of response message (Byte Format)

Device Address	(0A)h
Function Code	(81)h
Error Code	(02)h
CRC DATA	LSB (B0)h
	MSB (53)h

As you see in command message, coil information of (4A1)h = 1185 is required but there isn't any coil with 1185 address. Therefore error code with number (02) (Illegal Data Address) sends.
